

Contents

Chapter 1	General introduction	1
Chapter 2	A method for radiolabeling <i>Artemia</i> with applications in studies of food intake, digestibility, protein and amino acid metabolism in larval fish	45
Chapter 3	Digestion and absorption of a pure triacylglycerol and a free fatty acid by <i>Clupea harengus</i> L. larvae	64
Chapter 4	Dietary TAG source and level affect performance and lipase expression in larval sea bass (<i>Dicentrarchus labrax</i>)	80
Chapter 5	Dietary protein:lipid ratio and lipid nature affects fatty acid absorption and metabolism in a teleost larva	90
Chapter 6	Dietary protein/lipid ratio affects growth and amino acid and fatty acid absorption and metabolism in Senegalese sole (<i>Solea senegalensis</i> Kaup 1858) larvae	98
Chapter 7	Dietary neutral lipid level and source in Senegalese sole (<i>Solea senegalensis</i>) larvae: effect on growth, lipid metabolism and digestive capacity	109
Chapter 8	Food intake and absorption are affected by dietary lipid level and lipid source in seabream (<i>Sparus aurata</i> L.) larvae	146
Chapter 9	General discussion	179
Chapter 10	Summary	213
