ABSTRACT

RESUMO

FIGURE INDEX iv

TABLE INDEX v

CHAPTER I 1

INTRODUCTION 1

1. What is egg quality? 2

2. Factors affecting egg quality 2

2.1. Factors relative to the broodstock 3

2.1.1. Broodstock nutrition 3

2.1.2. Oogenesis 3

2.1.3. Other factors related to broodstock 4

2.2. Factors relative to fertilization processes 5

2.3. Factors related to husbandry conditions 6

3. How to measure egg quality? 8

3.1. Biological and physiological parameters 8

3.2. Biochemical parameters 9

3.3. Metabolic parameters 10

3.3.1. Carbohydrate metabolism 10

3.3.2. Protein metabolism 14

3.4. Molecular parameters 15

4. Why is the Senegalese sole important to aquaculture? 16

5. Justification of the present work 17

6. Aim of the present work 18

CHAPTER II 19

MATERIAL & METHODS 19

1. Broodstock management 20

2. Egg collection 21

3. Egg Sampling 22

3.1. Diameter measurements and fertility 22

3.2. Incubation and hatching rate 22

4. Biochemical quality assays	23
4.1. Sample preparation	24
4.2. Protein determination	24
4.3. Enzymes	25
4.3.1. Acid and Alkaline Phosphates	26
4.3.2. Malate Dehydrogenase	26
4.3.3. Glucose-6-Phosphatase	27
4.3.4. Glucose-6-Phosphate Dehydrogenase	28
4.3.5. Aspartate Aminotransferase (GOT)	29
4.4. Metabolites	29
4.4.1. Hexose, 6-Deoxyhexose, Heptose Assay	29
4.4.2. ATP	30
4.4.3. Total Free Carbohydrates Assay	31
4.4.4. Sialic Acids Assay	31
4.4.5. Determination of Ketoses with a Phenol-Acetone-Boric Reagent (PABR)	32
4.4.6. Free and Bound Ribose Assay	33
5. Statistical Analysis	34
CHAPTER III	36
RESULTS	36
1. Broodstock	37
2. Morphophysiological parameters of the eggs analyzed	38
3. Biochemical quality assays	41
3.1. Enzymes	41
3.1.1 Acid phosphatase	41
3.1.2. Alkaline phosphatase	41
3.1.3. Malate dehydrogenase (MDH)	42
3.1.4. Glucose-6-phosphatase (G6Pase)	43
3.1.5. Glucose-6-phosphate dehydrogenase (G6PDH)	44
3.1.6. Glutamate oxaloacetate transiferase (GOT)	44
3.2 Metabolites	45
3.2.1. Hexoses, 6-deoxyhexoses and heptoses	45
3.2.2. ATP	47
3.2.3. Sialic acids	47
3.2.4. Total free carbohydrates	48

3.2.5. Ketoses	49
3.2.6. Bound & free ribose	50
4. Statistic treatment of the collected data	51
CHAPTER IV	57
DISCUSSION	57
1. Morphophysiological parameters of the eggs analyzed	58
2. Biochemical quality assays	60
2.1. Enzymes	61
2.2. Metabolites	63
3. Relations between analyzed parameters and egg quality	65
CHAPTER V	67
CONCLUSIONS AND FINAL CONSIDERATIONS	67
REFERENCES	70
APPENDIX	I
APPENDIX I	II
APPENDIX II	III

FIGURE INDEX

Figure I.1 – General summarization of glycolysis.	11
Figure I.2 – General summarization of the gluconeogenesis.	12
Figure I.3 - General summarization of the pentose-phosphate pathway.	13
Figure II.1 – <i>Solea senegalensis</i> husbandry tanks at Ramalhete station.	20
Figure II.2 - Air-lift surface collector used in broodstock tanks.	21
Figure II.3- Structure used to incubate the eggs in the present study	22
Figure III.1 – Monthly averages of water temperature (°C), salinity (‰), and dissolved oxygen (%), registered in 2006.	37
Figure III.2 – Monthly average of feed distributed to the broodstock of <i>Solea senegalensis</i> , in 2006.	38
Figure III.3 – Percentage of viable and nonviable eggs of <i>Solea senegalensis</i> , harvested during the 2006 breeding period.	38
Figure III.4 – Average diameter of viable and nonviable eggs of <i>Solea senegalensis</i> , measured during the 2006 breeding period.	39
Figure III.5 – Percentage of fertilization of viable and nonviable eggs of <i>Solea senegalensis</i> registered during the 2006 breeding period.	39
Figure III.6 – Percentage of hatching registered during the 2006 breeding period.	40
Figure III.7 – Acid phosphatase activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	41
Figure III.8 – Alkaline phosphatase activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	42
Figure III.9 – Malate dehydrogenase activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	43
Figure III.10 – Glucose-6-phosphatase (G6Pase) activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	43
Figure III.11- Glucose-6-phosphate dehydrogenase (G6PDH) activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	44
Figure III.12 - Aspartate aminotransferase activity determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	45
Figure III.13 – Hexoses concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	46

Figure III.14 – 6-deoxyhexoses concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	46
Figure III.15 – Heptoses concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	46
Figure III.16 - ATP concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	48
Figure III.17 – Sialic acids concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	48
Figure III.18 – Free monosaccharide concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	49
Figure III.19 – Ketoses concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	50
Figure III.20 – Free ribose concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	51
Figure III.21 - Bound ribose concentration determined in viable and nonviable eggs of <i>Solea senegalensis</i> .	51

TABLE INDEX

Table II.1 – Weekly feeding plan for <i>S. senegalensis</i> broodstock.	21
Table II.2 – General proportions of the dilution series prepared for most of the standard solutions used in the present work.	25
Table II.3 – p-nitrophenyl standard solution (StaSol.) dilution series used to perform the standard curve.	26
Table III.1 - Spearman correlation test results between morphophysiological parameters measured in the viable eggs of <i>Solea senegalensis</i> .	52
Table III.2 - Spearman correlation test results between biochemical test results and morphophysiological parameters measured in the viable eggs of <i>Solea senegalensis</i> .	53
Table III.3 – Results of the ROC-curve test from the assays tested.	54

Table III.4 – Samples of eggs of *Solea senegalensis* selected after the establishment of the cutoff value for each test. 55

Table III.5 – Spearman correlation test results between biochemical test results and morphophysiological parameters measured in the viable eggs of *Solea senegalensis*. 55
